Our company is founded at the same time as our founder and name giver (e)Louis TIMmers sold his NOKIA mobile phone repairshop in september 2001. This company with over 100 employees, spread over two locations (Naarden and Groningen), was a level 3 repairshop, meaning all components, even the most difficult ones could be replaced. NOKIA people were amazed about the high level of our work. Before that, Mr. Timmers was active in electronics repair since the beginning of the 1980's and has serviced the avionics-, communications- and other electronic equipment of F16's fighters at his 4 years stay at Dutch Royal Airforce and later audio-, video- and RF-communications equipment as well as technician and shopmanager. During this time he also became a (passive) radio amateur (first PE1MXM, now PE1LTM). His efforts were rewarded with a "management buy out" procedure in MCC company where he was in charge of the repair shop till 1998 and could start his own company taking over 15 employees in that time.

After selling the repair company ELTIM Services, a solid personal financed base made it possible to start this new business. Our company, based in the Netherlands, is strongly committed to the MOREL drive units brand since 2001 already. We started as Europe's main distributor of all MOREL products, home audio, car audio and raw drivers program. We installed several local distributors for all three product groups throughout Europe. Unfortunately this setup didn't work and we dropped home and car audio affairs totally in 2005 and concentrated on the raw drivers program only.

Today we support the factory as well as our about 60 Europe wide OEM and other customers with our complete and quite large stock of all produced drive units today and our knowledge of the products. The personal interest of our Mr. Timmers in developing and technical talk about loudspeakers is becoming common known. Many OEM clients spoke with him at the MOREL booth at CES shows over the past years, where he informed professional customers about the actual drive unit program. We plan to increase this kind of support to you and Mr. Timmers spoke with a lot of manufacturers at Munich show in 2009. We received the "Raw Drivers Distributor of the Year" award at CES 2008 for our efforts and commitment to the Morel brand. Unfortunately Morel decided to drop this award thing again, otherwise we would had it again....-)

Since the beginning of 2009 we increase our portfolio for a "one-stop" policy, meaning we want to provide all kinds of related high quality products to our customers. We can supply not only Morel drive units, but also the full Mundorf and Hypex program, connectors, cable, cabinets, etc. As a matter of fact we can even support you in designing your system and can even produce prototype models for you.

More to find about us and the new MOREL drive units at:
Our full program is to find at :
